Research path

Case: --MV Sewol capsizing disaster

- 16 April 2014
- Passenger ferry in South Korea
- 304 out of 476 persons died

수심 37m

수온 12.6℃

유속 시속 8km

침몰 여객선 세월호

실종자 283명 중 상당수 선체 안에 갇혀 있을 가능성

시간대별 상황

15일 21:00 인천항 출발

16일 08:58 침몰 시작

09:10 구조본부 설치

09:30 목포 헬기 현장 도착

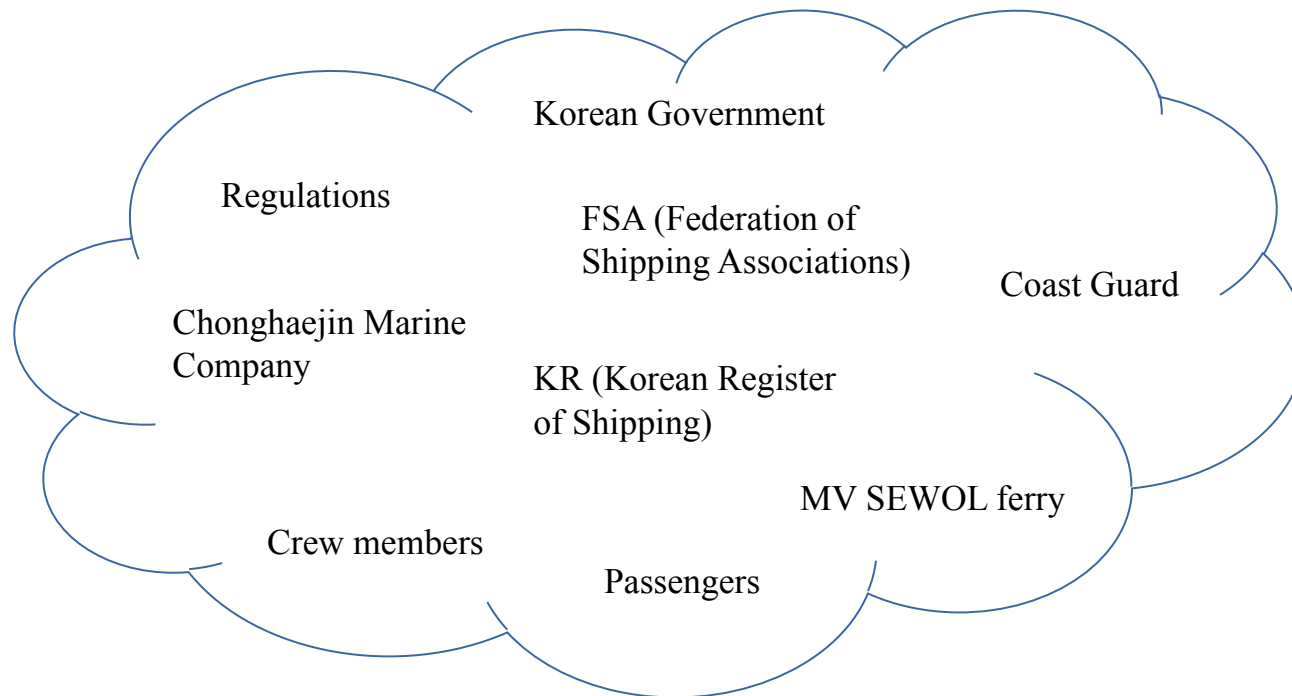

09:50 해경 함정 52명 구조

10:20 선체 90% 침몰

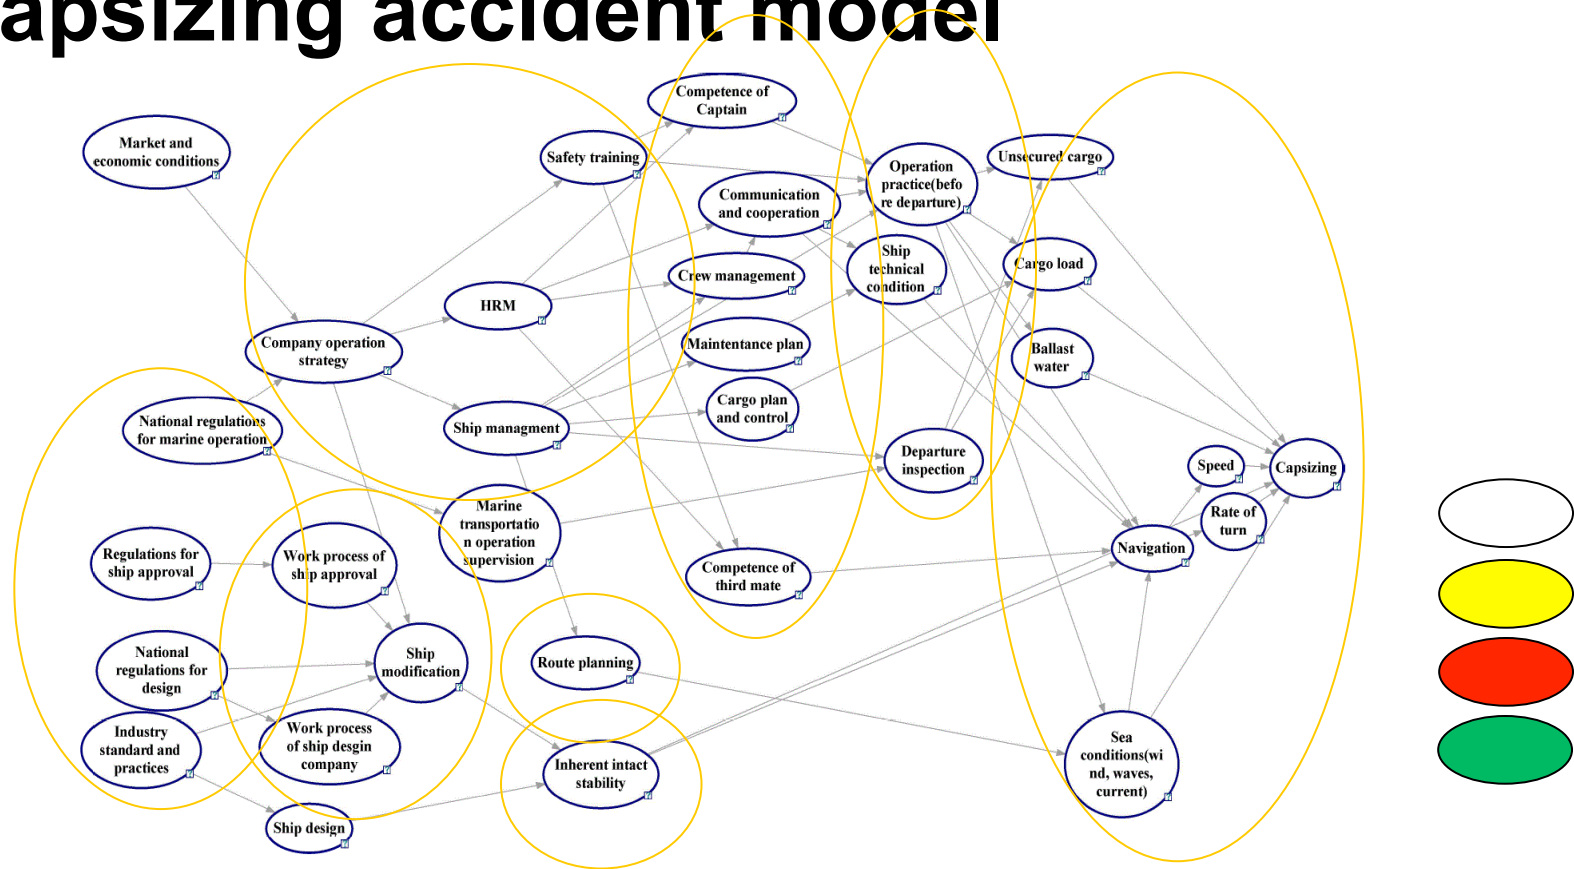

14:00 사망자 2명 확인

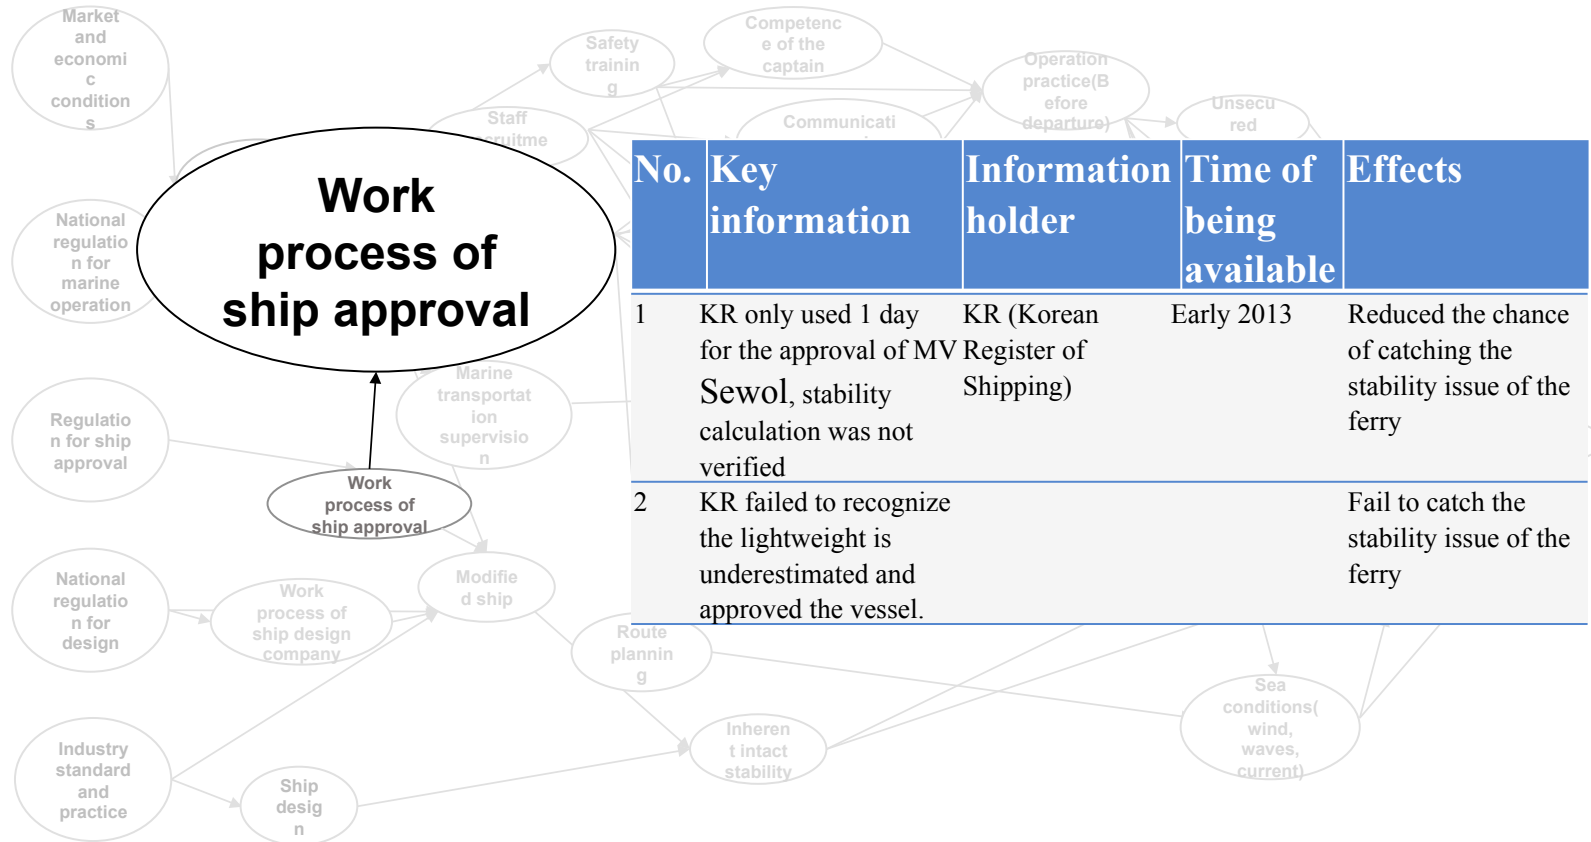

System components in MV Sewol capsizing

Capsizing accident model

Conclusions

1. The capsizing is not a surprise
2. A well-developed capsizing accident model and information availability is very useful for accident prediction
3. It provides hints in where and when to collect information for accident prediction
4. It indicates that different strategies can be applied at different system components at varied time for accident prevention.

Thank
you!!!
