

## International Workshop on Treatment of Uncertainties for Novel Aspects of Risk Analyses (31 March – 2 April 2025 – Madrid, Spain)

The OECD/NEA in collaboration with the Consejo de Seguridad Nuclear (CSN) will host an international workshop at the CSN headquarters in Madrid, Spain on 31 March – 2 April 2025.

The objectives of the workshop are to provide a forum to exchange information on the current and potential treatment of uncertainties for novel aspects of risk analyses and their associated considerations in risk-informed decision-making. The participants will also discuss the technical and organizational challenges associated with the different approaches and the ongoing work in these areas. The perspectives of practitioners, decision-makers, and other nuclear safety professionals with expertise in the treatment of uncertainties in risk assessments will enrich the workshop.

**Who should attend:** Experts from industry, regulatory authorities, technical support organizations (TSOs) and research institutes, safety analysis practitioners and consultants involved in probabilistic safety assessment (PSA) of nuclear installations or the associated decision-making from the OECD and NEA member countries, NEA strategic partners, invitees, and international partner organizations are encouraged to contribute and participate.

The workshop will include plenary and technical sessions as well as an additional facilitated wrap-up session. Active participation of the workshop attendees in the discussions as well as in the formulation of conclusions and recommendations will be highly appreciated.

More information and the programme of the workshop can be found at [https://www.oecd-nea.org/jcms/pl\\_94720](https://www.oecd-nea.org/jcms/pl_94720)
